V. INVESTMENT OPTION ELECTION

The Plan offers a wide variety of investment fund options. You may choose from a series of Core Funds, Target Retirement Date Funds, and Risk-Based Funds. In the table below you need to select an investment mix, or allocation, that suits your personal investment style and goals. Your initial selection directs us to allocate your contributions to a fund or a variety of funds.

We know that for many of our participants, this a difficult decision to make. Investing involves market risk, and it is possible to lose money while investing in a fund. The Investment Fund Descriptions on the next page provide some information on each fund. The Fund Performance Report and the Fund Fact Sheets Booklet included in the Enrollment Kit provide the investment type, management type, performance returns, fees, investment objectives, risks and other details of the various investment fund options offered under the Plan.

Enter the whole number percentage that you want allocated among the Plan's investments in the table below. Your contributions will be invested according to the allocation percentages you enter. The total of all investment allocations must equal 100%.

The Target Retirement Date Funds have been designated by the Board as the default investment fund under the Plan. In the absence of an investment selection by you, or if your instructions are not clear, your contributions will be invested in the appropriate Target Retirement Date Fund based on your date of birth most closely corresponding with your retirement date assuming you will retire at age 59, using the birth date ranges shown in the table below.

CalPERS Supplemental Income 457 Plan INVESTMENT FUND DESCRIPTIONS

Target Retirement Date Funds offer an automatically adjusting mix of investments designed to help build value in the early years and gradually becomes more conservative to protect that value as you approach retirement. Your investments stay tailored to your age and investment time horizon. Each maintains a diversified portfolio utilizing a 'fund of funds' approach that helps reduce the impact of market volatility. They're easy to choose — just select the fund with the date closest to when you anticipate retiring and indicate the percentage value where indicated. Please note that these funds assume a retirement age of 59.

Target Retirement Date Funds are a series of diversified funds each of which has a pre-determined asset mix that will adjust over time until and often beyond the fund's target date (2005, 2010, 2015....2050). The initial asset allocation is adjusted as a "glidepath," or the manner in which the fund will slowly be reallocated over time, across all target retirement dates. This glidepath is designed to reduce the level of risk as the participant approaches retirement. The "target date" refers to the date the participant will reach retirement age, assuming a retirement age of 59. The CalPERS Supplemental Income 457 Plan offers 11 distinct Target Retirement Date Funds (the "Fund" or "Funds") as investment options under the Plan utilizing the concept of diversification through asset allocation. You may select the Fund that most closely matches the year you plan on retiring. The target strategies are a series of premixed investment options that focus on maturity and change as you approach retirement.

The Table below shows the **Target Retirement Date Funds**, including associated birth date range and target retirement date for each fund.
